                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC one or more activities of a calcium receptor (CR) comprises: (A)
CC contacting a recombinant cell with a test compound, where the
CC recombinant cell comprises a recombinant nucleic acid expressing the CR,
CC provided that the cell does not have functional CR expression from
CC endogenous nucleic acid; (B) determining the ability of the test
CC compound to affect one or more activities of the calcium receptor; and
CC (C) comparing the ability with the ability of the test compound to
CC affect the one or more CR activities in a cell not comprising the
CC recombinant nucleic acid. The present sequence represents human
CC parathyroid CR, designated a pHuPCaR 5.2. The nucleic acid sequence of
CC pHuPCaR 5.2 can be used as part of the recombinant nucleic acid in the
CC method described above. The compounds identified can be used to treat
CC disorders of disorders characterised by abnormal calcium homeostasis, e.g.
CC hyperparathyroidism, osteoporosis and other bone and mineral-related
CC disorders associated with disrupted CC2+ responses, e.g. seizures,
CC stroke, spinal cord injury, hypoxia-induced nerve cell damage such as in
CC cardiac arrest or neonatal distress, epilepsy, neurodegenerative
CC diseases such as Alzhelmer's disease, Huntington, depression, and anxiety
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 52.594; Variance 100.413; scale 0.524

MPsrch_pp protein protein database search, using Smith-Waterman algorithm

Tabular output Run on: not generated Fri Mar 17 13:16:18 2000; MasPar time 44.86 Seconds 560.581 Million cell updates/sec

Description: Perfect Score: 6366 >US-09-361-652-2 (1-842) from US09361652.pep

Sequence: MLFWAAHLLLSLQLAVAYCW......NNTEHFQASIQDYTRRCGTT 842

Scoring table: PAM 150 Gap 11

82229 seqs, 29864866 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database swiss-prot38 1:swissprot

Statistics: Mean 53.985; Variance 93.429; scale 0.578

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-I- FUNCTION: SENSE CHANGES IN THE EXTRACELLULAR CONCENTRATION OF CALCIUM LONS. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY A G-PROTEIN THAT ACTIVATES A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM.

-I- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-I- ALTERNATIVE SPLICING.
-I- ALTERNATIVE SPLICING.
-I- TISSUE SPECIFICITY: FOUND IN KIDNEY, BUT NOT IN BRAIN, LUNG, LIVER, HEART, SKELETAL MUSCLE, OR PLACENTA.
-I- DISEASE: DEFECTS IN CASR ARE A CAUSE OF FAMILIAL HYPOCALCIURIC HYPERCALCEMIA (FHH) AND NEONATAL SEVERE HYPERPARATHYROIDISM (NSHPT), TWO INMERITED CONDITIONS CHARACTERIZED BY ALTERED CALCIUM HOMEOSTASIS. THE MUTATIONS REDUCE THE ACTIVITY OF THE RECEPTOR. FHH AFFECTED INDIVIDUALS EXHIBIT MILD OR MODEST HYPERCALCEMIA, RELATIVE HYPOCALCIURIA, AND INAPPROPRIATELY NORMAL PTH LEVELS. IN CONTRAST, NSHPT IS A RARE AUTOSOMAL RECESSIVE LIFE-THREATENING DISOMBER CHARACTERIZED BY VERY HIGH SERUM CALCIUM CONCENTRATIONS, SKELETAL DEMINERALIZATION, AND PARATHYROID HYPERPLASIA. IN SOME INSTANCES NSHPT HAS BEEN DEMONSTRATED TO BE THE HOMOZYGOUS FORM OF FRH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE; 96292293.

"A variant of metabotropic glutamate receptor subtype 5: an
evolutionally conserved insertion with no termination codon.";
Biochem. Biophys. Res. Commun. 194:622-627(1993).

-i- FUNCTION: RECEPTOR FOR GLUTAMATE. THE ACTIVITY OF THIS RECEPTOR
MEDIATED BY A G-PROTEIN THAT ACTIVATES A PHOSPHATIDYLINOSITOL-
CALCIUM SECOND MESSENGER SYSTEM AND GENERATES A CALCIUM-ACTIVATE
CHLORIDE CURRENT.
